The University of Colorado Health Sciences Center is seeking a full time neuropathologist at the assistant or early associate professor level. The position is immediately available and will remain open until filled. The candidate will rotate on frozen section coverage and final sign out for surgical neuropathology cases only; general surgical pathology service is not required. The position also involves major responsibility for autopsy neuropathology and eye pathology. Sign-out of muscle cases is not required, as these cases are covered by our Neurology service. Candidates with interests in neurodegenerative disorders, education of medical students, residents and fellows, and molecular neuropathology are especially being sought. While preference will be given to board-certified neuropathologists with experience, individuals completing fellowships in June 2021 are encouraged to apply. Inquiries and CV can be directed to bk.demasters@cuanschutz.edu.
